Pseudocode Homework

Write pseudocode for the following problems.

NOTE: If not assigned in the statement, assign all values a variable name before solving the problem.

1. Average 5 numbers. Given $n1 = 2.0$, $n2 = 4.0$, $n3 = 6.0$, $n4 = 8.0$, and $n5 = 20.0$.

2. Half a number, where the number is 100.

3. Subtract 55 from 268.

4. Find the discount price, if the price of a pair of shoes is \$98.69, and the discount is 15%. Then, calculate the total price, including 9% tax.
